Simulated eDNA fields - v4.1 (zero-mean GP, surface samples)

Per-station log(lambda); grey contours = 200 m and 1000 m isobaths

Per-station truth vs spatial covariates (v4.1)
log(lambda) at simulated stations - field is a single zero-mean GP draw per species
X (km, easting)
Y (km, northing)
Z_bathy (m, bottom depth)
Pacific hake
Humpback whale
Pacific white-sided dolphin

eDNA water column effect - v4.1

Per-species multiplicative shift on eDNA at each sample depth
